Rise up: Images of Bruin resiliency during COVID-19

June 22, 2020

Idriss Njike/UCLA

May Xiao, from Chongqing, China, leans out the window to talk with her downstairs neighbor, Sara Vaughn.

In just six months (has it really been only that long?) COVID-19 has remade our world. Whether in our roles as students, teachers, employees, volunteers, colleagues, parents, children, caregivers or friends, the pandemic has touched every aspect of our lives.

As the adversity of forced separation loomed over us, it was met in force by the ways Bruins — be they students, professors, staff or alumni — have
shown resiliency, compassion and ingenuity as they’ve risen to meet this historic moment.

We bring you this visual essay, because there’s a unique power in how photography captures the temporariness of the situation in a way that feels permanent.

Despite childcare challenges imposed by the pandemic, LeighAnna Hidalgo completed her dissertation on April 13 while staying safer at home in her apartment in Los Feliz. At home, Hildago’s office became a small bistro table for a desk and her children’s bed as her chair. It was painful for her being there at home with her family, but also absent from them at the same time. “That was the hardest part. They miss me. And I feel bad about stopping them, since they want to play with me or have a tickle session. They’re not used to my husband and I being home. They’re used to being at day care or kindergarten, so they want our attention.”
But the experience has not been without its ironic family moments. “I had to finish my dissertation on time, so I started a countdown: ‘OK guys just four more days, and then I am all yours.’ My daughter would say, ‘Mommy, I can’t wait. When this is over we’re just going to snuggle all day.’ Of course, when it finally happened, she snuggled me for two minutes and then she was over it, and went off to do something else.”

Students and staff in the dining halls adapted to wearing face masks and speaking through the plexiglass barriers.

Dayanni Bhagwandin

UCLA graduate student Dayanni Bhagwandin participates in the California NanoSystems Institute's Kitchen Science Experiment on biopolymers. This was the first in a series of online demonstrations for high school students and their teachers. These demonstrations introduced nanotechnology concepts that the students and teachers could perform at home with readily available materials.

Moctesuma Esparza, a two-time UCLA alumnus, is a veteran film producer and CEO of Maya Cinemas, a theater chain serving Latino communities. Esparza serves on the dean's executive board of the UCLA School of Theater, Film and Television. With film production, movies theaters and schools all closed, Esparza remains active at his home in Sierra Vista.

“The challenge is to find ways to be engaged with life, which is to be of service. Before COVID-19, I used up my phone battery everyday talking on numerous calls for four or five hours. That hasn't changed.”

For Esparza, resilience starts with a life dedicated to service to one's community but also introspection.

“What I have done is both strengthen my discipline of meditation and continue finding ways to be engaged. Herd immunity is not just about antibodies; it starts with emotional wellbeing and resilience grounded in our need to be together. For Latinos, that explains the paradox that we face more health challenges than any other group but have longer life spans.”
Kristy Guevara-Flanagan

Kristy-Guevara Flanagan, associate professor of film, and her daughter were on their computers in their shared home office space during the safer-at-home orders caused by the COVID-19 pandemic.

Reed Hutchinson/UCLA

It’s hard to be a flamenco dancer while staying safer at home in a populated apartment building in Los Angeles. So, we asked Ryan Rockmore, Ph.D. candidate in culture and performance in the UCLA Department of World Arts and Cultures/Dance, to visit the empty campus and show us his art form.

Some thoughts on the pandemic from Ryan: “During this time, I am trying to use the isolation and solitude that I have been granted to focus on sustainable routines and generative work habits, many of which I lacked prior to the pandemic. I also continue to feel grateful for the fact that the physical health and financial stability of my family and friends have remained largely unaffected by COVID-19. While the situation is less than ideal for me, it is far more troubling and precarious for many others; I try to keep these realities in mind when I am tempted to complain or when I start to lose focus on what this means for others around the world. In the end, I think the past couple months and the ones ahead have been and will be a time for continued interrogation of what my
graduate work means in the larger scope of my life and what aspects of my artistic practice, outside of commercial success or notoriety, actually feed my soul."

“Teaching remotely is interesting. There is a different focus. The material is transmitted through language, anatomical information (images, the model skeleton, and of course some minimal moving). I feel the course structure is more streamlined. Although the absence of moving the way we know it, and the absence of touch is so challenging in a course that is centered around touch
and hands on guidance, it is somehow more intimate and focused. We are learning in a very
different way, for sure," said Ros Warby, adjunct professor in the UCLA Department of World Arts
and Cultures/Dance, shown teaching “Dance 160: Topics in Body Mechanics: Alexander
Technique.”

Gustavo Tepetla

“I had to convert part of my living room area into a creative production studio in order to be able to
complete assignments for my major, design media arts, and for my minor in visual and performing
arts education. As you can see from the toys, I am also a father/parenting student of a 3-year-old
daughter, Kayla,” said Gustavo Tepetla.

Kelly Ma/UCLA

Campus Library Instructional Computing Commons, or CLICC, offers technology and support for UCLA students, faculty and staff. As UCLA moved to remote learning, CLICC’s student consultants and UCLA Library staff rapidly distributed more than 1,600 laptops, tablets and mobile hotspots to students and faculty to ensure equitable access to classes. The CLICC cubbies at Charles E. Young Research Library, pictured, emptied soon after UCLA issued its safer-at-home order.

Emil Chang/UCLA

During safer-at-home orders, trainers from UCLA’s Bruin Health Improvement Program, or BHIP — a full-body conditioning program that typically happens five days a week on campus — quickly pivoted to creating accessible at-home workouts emailed weekly to participants.

Jeff Newton/UCLA Chicano Studies Research Center

Darling Sianez, business manager at the UCLA Chicano Studies Research Center, lives in a three-
generation household in El Sereno. Working from home during the pandemic has eliminated her lengthy commute, but balancing work and family life in the confines of a small house is stressful. Given the tight quarters in her home, and the need to shelter in place, Sianez bought a small trampoline to help her work out her tension, manage her anxiety, and get her daily exercise.

“So, I start the day on my tiny trampoline because I can’t work out any other time of the day. I use videos online to learn new exercises. It’s fun and relaxing, even though my legs are sore. It’s really hard. Ten minutes on the trampoline feels like I have run a mile. But it’s nice to get off the ground,” she said.

Sianez visits campus twice a week to take care of essential business.

“It’s kind of scary to be in an empty building, but I really enjoy walking around the campus. I don’t think we really appreciate how beautiful UCLA is when we’re all there working, studying, taking a lunch break, or talking to each other. This is a very special place.”

Sylvan Oswald, assistant professor of theater, shooting a mini-lecture in his work-from-home setup.

_Melony Varnado_

Early on in the crisis, city, county, state and federal leaders held daily press briefings on the coronavirus and a team from UCLA Strategic Communications, including Melony Varnado, was tasked with watching every one and writing short recaps that were shared immediately with their colleagues. Some people were so busy that these emails became vital daily sources of news.

Darby Hughes, from Orange County, serving as a proctor. Hughes is a member of the UCLA class of 2021, majoring in Chinese and minoring in accounting.

_Jessica Wolf/UCLA_

“Poems I wrote for the CAP UCLA online poetry bureau. Typically this happens in person before
performances on campus. We did two of them online instead during National Poetry Month in April,” said Jessica Wolf, senior media relations officer in UCLA Strategic Communications.

Christelle Snow/UCLA

“I’ve been making trips to campus to take photos requested by our audience for their Zoom backgrounds. One thing that I found really important to Bruins, especially current students and recent grads, is Powell Cat. He seems to have become an avatar for our collective wellbeing. If Powell Cat is OK, we will be OK,” said Christelle Snow, social media manager in UCLA Strategic Communications.

This project would not have been possible without collaboration from people across campus. Huge thanks to: Adam Amengual, Katsushi Arisaka, Avishay Artsy, Ariane Bicho, Dayanni Bhagwandin, Anne Marie Burke, Kylie Carrigan, Samantha Chan, Emil Chang, Cheryl Cheng, Erin Cooney, Carla Denly, Sarah Dundish, Anna Elgart, Kristy Edmunds, Rebecca Epstein, Moctesuma Esparza, Carlin Faucett, Melissa Faybik, Al Ferrone, Estellaleigh
Franenberg, Meryl Friedman, Kristy Guevara-Flanagan, Liv Heidenreich,
